

DESTRUCTION & DEMIL

Complete, flexible and safe.
This is how we destroy, demilitarize and recycle
your obsolete, aged or surplus explosives,
ammunition and weapon systems.
For us, the end is only the beginning.

TEST. ENHANCE. CONTROL.
DESTRUCTION & DEMIL

The end is only the beginning

Bofors Test Center has one of the largest Scandinavian destruction sites for explosives waste. Since the 1950s, we have handled and disposed dangerous products far away from populated areas at our 100 km² operations area. The foundation of this activity is our in-depth knowledge of explosives, a tradition that dates back to 1886.

Leave your present problems to us and keep your focus on the future.

COMPLETE

Bofors Test Center has a number of different approaches for handling explosives, ensuring that they are disposed in the best and safest way:

- Open burning
- Open detonation
- Burning in destruction chamber
- Dismantling
- Demilitarization
- Recycling

FLEXIBLE

Our unique ability to adapt our activities to specific requirements enables us to take care of your needs in whichever way suits you. Our extremely short lead times allow you to quickly get past the need for disposal and move towards other goals.

SAFE

We have over 120 years' experience of handling, testing and destroying explosives, ammunition and weapon systems. We know in detail the safest way to meet all such needs. Our geographical position and our huge operating area are also a strong guarantee of safety. All transport to and within the operations area takes place using special vehicles and specially trained drivers.

**DEFEATING
THE IMPOSSIBLE
SINCE 1886**
